

BESPOKE PRECAST POWER

At Murphy Precast, we believe in addressing the customers' requirements, solving problems and offering solutions. Precast provides a solution for many projects. We work to think outside the box and solve insolvable issues and this is what precast power is all about.

We work with engineers, architects and construction managers to develop, design and engineer bespoke products that are unique.

The process with our bespoke products is simple, we provide a free onsite visit and consultation to assess what a site/project requires and to see what we can design and develop to meet the requirements.

Commercial Construction

Specific precast build requirements to assist engineers and construction. Some products produced for this sector include manholes and storm water products.

ENVIRONMENTAL & RENEWABLE ENERGY

Murphy Precast are experienced at working with this sector and develop bespoke products including Storm Water Management precast products.

We also provide qualified guidance with regard to what is required for the customer in terms of storm-water management, energy conservation and durability.

In response to growing environmental and economic forces, architects, engineers, developers and owners are seeking efficient, innovative building solutions that conserve non-renewable resources.

Concrete is now more recognized for its strong environmental benefits in support of creative and effective sustainable development.

When considering the lifetime environmental impact of a building material-extraction, production, construction, operation, demolition and recycling - concrete is an excellent choice to meet these goals.
